Assignment #8 User Manual

Welcome to BeepBoopBoard! This tutorial will help guide you through the registration system program.

Getting Started Linux: This program can be run right in mobaxterm on the turing server. To install this project take the assignment8.db and assignment8.cpp files from the github and put them in the same folder. Then in the turing server type `g++ assignment8.cpp -lsqlite3`. Once this is done then type `./a.out`.

Repository link: <https://github.com/HxmzaK/Semester-ProjectAPC>

Instructions: The program starts with being introduced and asked to sign in as whichever user. The login functions do not work but any username and password will login successfully. You can then select from the menu which function you want to do. The only functions that work at search course and search course by crn. The rest of the functions print a statement saying what the function should do. Those functions were Sara's job. Log out also works.
